"TACI-ligand interactions are required for T cell activation and collagen-induced arthritis in mice.";
Nat. Immunol. 2:632-637(2001).
-!- FUNCTION: Receptor for TWFSF13/APRIL and TWFSF13B/TALL1/BAFF/BLYS that binds both ligands with similar high affinity. Mediates calcineurin-dependent activation of NF-AT, as well as activation of NF-kappa-B and AP-1. Involved in the stimulation of B- and T-cell function and the regulation of humoral immunity (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: LIKELY TO REPRESENT A WIDESPREAD ENDOPROTEASE ACTIVITY WITHIN THE CONSTITUTIVE AND REGULATED SECRETORY PATHWAY. CAPABLE OF CLEAVAGE AT THE RX(K/R)R CONSENSUS MOTIF: MAY BE RESPONSIBLE FOR THE MATURATION OF GASTROINTESTINAL PEPTIDES. MAY BE INVOLVED IN THE CELLULAR PROLIFERATION OF ADRENAL CORTEX VIA THE ACTIVATIO OF GROWTH FACTORS.

CATALYTIC ACTIVITY: RELEASE OF MATURE PROTEINS FROM THEIR PROPROTEINS BY CLEAVAGE OF ARG-XAA-YAA-ARG-|-ZAA BONDS, WHERE XAA CAN BE ANY AMINO ACID AND YAA IS ARG OR LYS. SUBCELLULAR LOCATION: PCSA IS SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PC5B IS A TYPE I MEMBRANE PROTEIN LOCALIZED TO A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT PARANUCLEAR PARANUCLEAR

"Two-amino acid mollecular switch in an epithelial morphogen regulates binding to two distinct receptors.";

Science 290:523-527(2000).

-I-FUNCTION: Receptor for EDA isoform A2, but not for EDA in A1. Mediates the activation of NF-kappa-B. Activation see the mediated by binding to TRAF6.

-I-SUBUNIT: Associates with TRAF1, TRAF3 and TRAF6.

-I-SUBCELLULAR LOCATION: Type III membrane protein.

-I-SUBCELLULAR LOCATION: Type III membrane.

                                                                                                                                                                                                                                                                                                                                                                                                                                               progression (By similarity).

SUBDNIT: Interacts with MMP-9.

SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.

SUBCELLULAR INTERACTION: Attached to the membrane by a GPI-anchor.

DEVELOPMENTAL STAGE: In E10.5 embryos the RECK protein is widely expressed in mesenchymal tissues and is relatively abundant in the expressed in mesenchymal tissues and is relatively abundant in the sexpressed in mesenchymal tissues and large blood vessels such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: Negatively regulates matrix metalloproteinase-9 (MMI by suppressing MMP-9 secretion, and by direct inhibition of it enzymatic activity. RECK down-regulation by oncogenic signals facilitate tumor invasion and metastasis. Appears to also regulate MMP-2 and MTI-MMP, which are involved in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                    SIMILARITY: CONTAINS 3 KAZAL-LIKE DOMAINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESIDUES.
```

```
FUNCTION: APOMUCIN IS PART OF MUCIN, THE MAJOR GLYCOPROTEIN SYNTHESIZED AND SECRETED BY MUCOUS CELLS OF THE SUBMAXILLARY GLAND. ITS HIGHLY VISCOUS AQUEOUS SOLUTIONS SERVE TO LUBRICAT THE ORAL CAVITY AND TO PROTECT IT FROM THE EXTERNAL ENVIRONMENT.

SUBUNIT: INTERMOLECULAR DISULFIDE BONDS COULD HELP MAINTAIN I
MULTIMERIC MUCIN STRUCTURE.
SUBCELLULAR LOCATION: Secreted
                                                                                                                                                                                                      LUBRICATE
```

TISSUE SPECIFICITY: SUBMAXILLARY MUCOSAE.
DOMAIN: CONTAINS TANDEMLY REPEATED, IDENTICAL SEQUENCES

QF 81

PTM: EXTENSIVELY O-LINKED GLYCOSYLATED ON SER AND THR RESIDUES OF THE REPRAT UNITS. HIGHEST GLYCOSYLATION APPEARS TO OCCUR ON SER RESIDUES WHICH HAVE GLY AT POSITIONS AT +2 OR -2 FROM THE GLYCOSYLATION SITE OR, WHERE GLY IS THE PENULTIMATE RESIDUE. THE PRESENCE OF PROLINE (USUALLY AT POSITION +3 OR -3) APPEARS TO ALSO ENHANCE GLYCOSYLATION.

SIMILARITY: CONTAINS 1 VMFC DOMAIN.
SIMILARITY: CONTAINS 1 C-TERMINAL CYSTINE KNOT-LIKE (CTCK) DOMAIN.

-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS SEEMS TO BE PRODUCED BY ALTERNATIVE SPLICING.

-!- TISSUE SPECIFICITY: EXPRESSED IN T-LYMPHOCYTES.

-!- DOMAIN: THE PROPEPTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHARSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC RETICULUM.

-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S8.

-!- SIMILARITY: CONTAINS 1 HOMO B/P DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CHAIN

ASSOCIATED PROTEIN (RAP).
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. EXPRESSED IN
CLATHRIN-COATED PITS; A SOLUBLE FORM IS POSSIBLY DERIVED BY
CLEAVAGE AT THE CELL SURFACE.
TISSUE SPECIFICITY: EPITHELIAL CELLS OF KIDNEY GLOMERUIUS AND
PROXIMAL TUBULE, LUNG, EPIDIDYMIS, YOLK SAC, AMONG OTHERS.
SIMILARITY: CONTAINS 36 LDL-RECEPTOR CLASS A DOMAINS.
SIMILARITY: CONTAINS 37 LDL-RECEPTOR CLASS B DOMAINS.
SIMILARITY: CONTAINS 17 EGF-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: RECEPTOR-MEDIATED UPTAKE OF POLYBASIC DRUGS SUCH AS APROTININ, AMINOGLYCOSIDES AND POLYMYXIN B.

PUNCTION: Negatively regulates matrix metalloproteinase-9 (NMF FUNCTION: Negatively regulates matrix metalloproteinase-9 (NMF by suppressing MMP-9 secretion and by direct inhibition of its enzymatic activity. RECK down-regulation by oncogenic signals facilitate tumor invasion and metastasis. Appears to also regulate MMP-2 and MT1-MMP, which are involved in cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   D50406; BAA34060.1; -

```
SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN ENDOTHELIAL CELLS
AND THEIR PROGENITORS, THE ANGIOBLASTS. HAS BEEN DIRECTLY FOUND
IN PLACENTA AND LUNG, WITH A LOWER LEVEL IN UMBILICAL VEIN
ENDOTHELIAL CELLS, BRAIN AND KLDNEY
DISEASE: DEFECTS IN TEK ARE A CAUSE OF DOMINANTLY INHERITED VENOUS
MALFORMATIONS (VMCM1), AN ERROR OF VASCULAR MORPHOGENESIS
CHARACTERIZED BY DILATED, SERPIGINOUS CHANNELS.
SIMBILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. TIE
SUBERMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                  CATALYTIC ACTIVITY: ATP + a protein tyrosine =
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RECEPTOR FOR ANGIOPOLETIN 1. IT MAY CONSTITUTE THE EARLIEST MARMALIAN ENDOTHELIAL CELL LINEAGE MARKER: PROBABLY REGULANT ENDOTHELIAL CELL PROLIFERATION, DIFFERENTIATION AND GUIDES TO PROPER PATTERNING OF ENDOTHELIAL CELLS DURING BLOOD VESSEL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RECEPTOR FOR ANGIOPOIETIN 1.

Br. J. Dermatol. 139:325-331(1998).

-i- FUNCTION: Binding to cells via a high affinity receptor, laminin is thought to mediate the attachment, migration, and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.

-i- SUBUNIT: Laminin is a complex glycoprotein, consisting of three different polypeptide chains (alpha, beta, gamma), which are bound to each other by disulfide bonds into a cross-shaped molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=99068967; PubMed=9767254; Mellerio J.E., Eady R.A., Atherto

"The Drosophila yolkless gene encodes a vitellogenin receptor belonging to the low density lipoprotein receptor superfamily.";
Proc. Natl. Acad. Sci. U.S.A. 92:1485-1489(1995).
-:- FUNCTION: INVOLVED IN UPTAKE OF VITELLOGENIN BY ENDOCYTOSIS.
-:- TISSUS SPECIFICITY: OVARY.
-:- SIMILARITY: CONTAINS 13 LDL-RECEPTOR CLASS A DOMAINS.
-:- SIMILARITY: CONTAINS 7 EGF-LIKE DOMAINS.

                                                                                                                                                                                                                                                                                                        MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/810,572A
FPILING DATE: 28-FEB-197
CLASSIFICATION: 536
ATTORNEY/AGENT INFORMATION:
NAME: Jackson Esq., David A.
REGISTRATION NUMBER: 26,742
REFERENCE/DOCKET NUMBER: 1340-1-007
                                                                                                                                                                             TELEPAX: 201-343-1684
INFORMATION FOR SEQ ID NO: 6
SEQUENCE CHARACTERISTICS:
LENGTH: 166 amino acids
                 MOLECULE TYPE: I
HYPOTHETICAL: NO
FRAGMENT TYPE: N
ORIGINAL SOURCE:
ORGANISM: Homo
